

Git Cheat Sheet

- **git config --global user.name "Your Name"**: Sets the name that will be attached to the commits.
- **git config --global user.email "your@email.com"**: Sets the email linked to the Git activity.
- **git init**: Initializes a new local repository and starts tracking the current folder.
- **git status**: Shows the state of the working directory and the staging area.
- **git add <file>**: Adds a specific file to the staging area, preparing it for a commit.
- **git commit -m "message"**: Records a snapshot of the staged changes with a descriptive note.
- **git branch <name>**: Creates a new branch.
- **git checkout <name>**: Switches from the current branch to the specified one.
- **git merge <name>**: Integrates the changes from the specified branch into the current active branch.
- **git branch -M main**: Renames the primary branch to "main".
- **git remote add origin <url>**: Links the local repository to a remote repository on GitHub.
- **git push -u origin main**: Uploads the local commits to the remote server and links the branches for future use.
